COOLING TECHNOLOGY

HEATING TECHNOLOGY

SILENCING/EMISSION TECHNOLOGY

HYBRID/EV TECHNOLOGY

Avoid Common Engine Heater Installation Mistakes:

DO NOT USE AN ENGINE HEATER WHEN USING 100% ANTIFREEZE. A 50/50 mixture is recommended. Using a mixture that is richer than 65% will cause the element to fail prematurely.

DO NOT RUN YOUR ENGINE WHILE THE ENGINE HEATER IS PLUGGED IN. This will create an air bubble around the element which will then cause the element to burn out prematurely.

DO NOT PLUG IN YOUR ENGINE HEATER PRIOR TO INSTALLING TO "SEE IF IT WORKS". Without being submerged in liquid, the heat generated has nowhere to go and could result in serious burns.

HOW TO SAFELY TEST A HEATER. Connect a multi-meter to the heater pins. A reading between 5 ohms and 100 ohms indicates that the heater is working correctly.

DO NOT USE PETROLEUM BASED LUBRICANTS ON THE O-RING. A petroleum based lubricant will significantly reduce the life of the O-ring. Use antifreeze instead.

DO NOT OVER TIGHTEN THE HEATER. The O-ring will form an adequate seal when the heater is torqued to the specifications in the instructions. Over tightening will strip the screw threads and reduce the quality of the seal.

AFTER HEATER USE, DISCONNECT THE EXTENSION CORD FROM THE HEATER CORD BY FIRMLY GRASPING EACH PLUG AND PULLING IN OPPOSITE DIRECTIONS. Only grasp the plugs. Do not grasp, pull, yank or snap the cords to disconnect power. Damage will result to the power cord connections which could result in permanent malfunction and even an electrical short.

See page 77-79 for replacement cordset information

Oil Heaters:

- Easy to spec: Not engine model specific!
- **10 watts of power per quart of oil**
- Keeps oil warm and free flowing for instant lubrication
- Stainless steel low watt density heating elements for long life in oil and hydraulic fluid applications
- Can be used in oil pans, transmissions, hydraulic systems, etc.

All 120V Immersion heaters CSA approved

For oil heater selection, measure space and determine threading at installation location.

ACCESSORY: 8602824;

1/2" NPT Adapter Bushing. For use on steel pans only. 1/2" NPT oil pan heaters are supplied with weld or braze-in adapter.

Note: To prevent potential damage to heater and fluid, oil pan heaters should only be used to keep warm oil warm. Do not use with cold oil.

PART #: 8500633 - BASIC KIT

CAB POWER® Long-haul Trucking Convenience Products

THE CAB POWER® SYSTEM is a series of pre-wired, modular components for cabs and sleepers of over-the-road trucks and service vehicles. The system allows for "living room" electrical convenience without the need to keep the truck engine idling by distributing power from APU's, inverters and land based electrical grids (Shore Power).

Features and Benefits:

- Accommodates standard household appliances and office equipment.
- Eliminates engine idling for electrical power generation reducing air and noise pollution.
- Idling reduction results in fuel cost savings and less engine wear.
- Quick and simple installation (less than two hours).
- Adaptable, modular design features quick connect wires, and unique mounting system.
- Easy to customize to all truck makes. Harnesses can be routed to fit all interior cab configurations.
- System components are weatherproof, durable, and resistant to adverse over-the-road trucking conditions.
- Can be factory installed or added as an aftermarket enhancement..

A Note About Extension Cord Selection and Usage:

When using an extension cord with one or more heating devices, it is important that the TOTAL current draw of all devices not exceed the capacity of the extension cord or the AC circuit. Use only 3-wire GROUNDED extension cords. Ground Fault Interrupter (GFI) service is also recommended. See page 88 for more information on proper cord length and gauge.

NOTE: All circulation heaters on pages 71-73 are equipped with different male plugs depending on the wattage and voltage requirements of the heater. This diagram shows the plug configuration for the three wattage/voltage combinations that are used. Vehicles with heater hose connected to radiator cannot use circulation type heaters.

DIESEL FUEL HEATERS

Lower operating costs by using #2 fuel all year

- Transfers heat from engine coolant to the fuel just before the fuel filter for maximum efficiency
- Eliminates clogged fuel filters when temperatures are below 10°F (-12°C)
- Exclusive stainless steel construction with no internal welds prevents coolant from leaking into fuel
- Minimal pressure drop
- Can be used as a heat exchanger in some hydraulic applications
- Port size: 1/2 - 14 NPT (Heavy-Duty)

**Heavy Duty Model
Part No. 8208751**

DIESEL STARTING FLUID SYSTEMS

- Pre-heats combustion chamber in diesel engines for quick starts
- Measured/metered shot system limits the amount of starting fluid that can enter an engine—provides for optimum starting with less chance of waste or engine damage
- Convenient, one person operation
- Economical—about 16¢ per start
- High pressure replacement cylinders meet D.O.T. standards
- Available in 12 and 24 volt electrical and mechanically operated models
- Uses standard 1 inch cylinders

NOTE: Diesel Starting Fluid Systems are NOT for use with engines equipped with glow plug or flame thrower systems, or engines equipped with intake air heater.

If your engine is not under "Specific Applications", then choose a kit based on the engine size.

¹Air-to-air aftercooled engines (ATAAC) generally will use an 8202982 atomizer installed in pipe between discharge side of aftercooler and engine manifold.

²Use 8202966 if installed in blower box or manifold.

³Use 8202982 if installed in air intake horn.

⁴Mini ether system (#8200001) may be used for this application.
